Experiment 4: Online Train Reservation System:

AIM:

To design and implement a web-based Train Reservation System that allows users to search trains, reserve berths, verify PNR status, and handle cancellations, while enabling railway administrators to maintain train schedules and fare charts.

ALGORITHM:

 Start and load the railway portal interface.

 Passenger Login: Verify user credentials before granting ticket reservation access.

 Train Search & Availability:

- Enter source station, destination station, date of journey, and travel class (1A, 2A, 3A, SL).
- Display available trains, intermediate halts (via-details), and seat quotas.

 Reservation & PNR Generation:

- Capture passenger names, ages, and berth preferences.
- Complete payment (online/offline mode) and generate a unique 10-digit PNR number.
- Send transaction and reservation records to the system administrator.

 PNR Status Tracking: Accept a PNR query and display real-time status (Confirmed, RAC, Waiting List).

 Cancellation & Refund:

- Accept cancellation requests using the PNR number.
- Calculate refundable amounts according to cancellation timeframes and fare rules.

 Admin Dashboard: Update train routes, schedules, zone-wise fare tables, and approve refund claims.

 Stop.

OUTPUT:

National Railway Reservation Portal
Book Train Journey Ticket
From Station (e.g. MAS - Chennai)
To Station (e.g. SBC - Bangalore)
11/02/2026
Sleeper (SL) - ₹320
Passenger Full Name
Age
Reserve Ticket
Check PNR Status / Cancel Ticket
Enter 10-digit PNR Number
Check Status
Cancel & Refund
