Experiment 6: Online Cake Ordering System

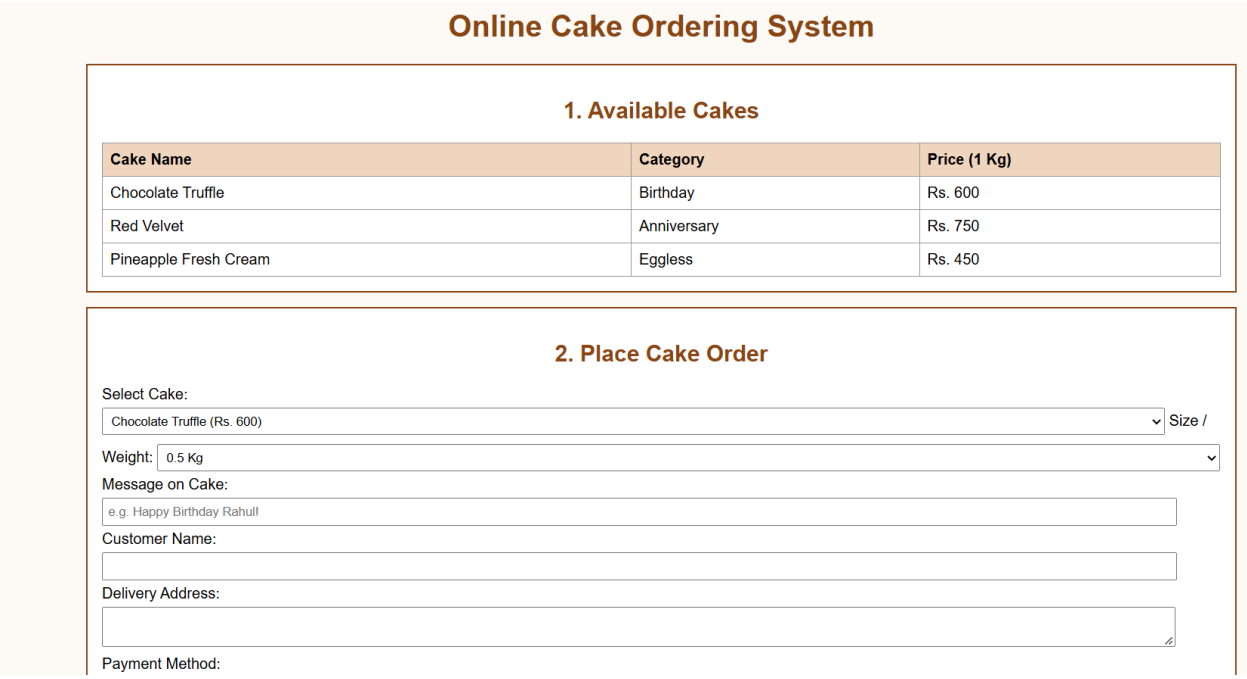

AIM:

To create an e-commerce website for an Online Cake Store allowing customers to browse, filter, customize, and order cakes, while providing a dedicated portal for bakery admins to manage catalog items and track shipments.

ALGORITHM:

- Start and open the bakery e-commerce storefront.
- User Management: Provide registration and login interfaces for customer dashboards.
- Catalog & Filtering:
  - Display cakes organized by category, flavor, and occasion with product images and descriptions.
  - Allow users to filter products by sub-category and price range.
- Customization & Ordering:
  - Select cake size/weight and enter custom celebration messages.
  - Add selected items to the shopping cart, enter the delivery address, and proceed through checkout.
  - Display order confirmation and send verification email.
- Order Tracking: Display active order status and delivery progress on the user dashboard.
- Admin Dashboard:
  - Add new cake items with descriptions, images, and prices.
  - Manage orders, update baking/dispatch statuses, and manage shipping locations.
- Stop.

OUTPUT:

Online Cake Ordering System

1. Available Cakes
